HAV is contagious & can harm your liver.

HAV usually spreads person-to-person through objects, food or drink that are contaminated by small amounts of stool from a person with HAV.

Prevent the spread of HAV.

Talk to your health care provider about getting vaccinated.

HAV can spread person-to-person from any sexual activity with a person who has HAV—using a condom will not prevent the spread of the virus. People who are sick with HAV should avoid sexual contact. People who are at-risk should get vaccinated.

An additional way to help prevent the spread of HAV is to wash your hands with soap and warm water for at least 20 seconds:

BEFORE YOU
- Prepare food.
- Work with food that isn’t already packaged.

AFTER YOU
- Touch people or public surfaces.
- Use the restroom.
- Change a diaper.
- Cough, sneeze or use a handkerchief or tissue.
- Use tobacco, eat or drink.

The HAV vaccine is safe & effective.

If you're at risk, you should get vaccinated.

The vaccine is given as 2 shots, 6 months apart. You need both shots for the vaccine to work long-term.

The HAV vaccine is safe & effective.

If you're at risk, you should get vaccinated.

The vaccine is given as 2 shots, 6 months apart. You need both shots for the vaccine to work long-term.

Don’t share:
- Towels, toothbrushes or eating utensils.

Don’t touch:
- Food, drinks, drugs or cigarettes that have been handled by a person with HAV.
